(54) Title: METHOD OF CONTROLLING ACCESS TO A COMMUNICATION NETWORK

(57) Abstract: A method of controlling access to infrastructure (40) is provided. The method pertains to a terminal (20) that can be communicatively coupled to the infrastructure (40). Moreover, the terminal (20) is arranged to include a computer processor (60) that can be coupled to an associated local memory device (70) capable of receiving data carriers (200a, 200b). The method involves a first step of arranging for the processor (60) to execute one or more software applications therein which are at least in part operable in a substantially seamless manner to a user (90) of the terminal (20) for accessing data content from one or more of the local memory device (70) and the infrastructure (40). The computer processor (60) is at least partially restricted regarding data content that it is capable of receiving from the infrastructure (40, 50) and/or requesting from the infrastructure (40, 50).
